# *Quantum information theory*

What happens when we encode information in quantum systems?

Quantum technologies  
Quantum many-body systems  
Ultra-cold atoms

Quantum optomechanics  
Foundations of quantum theory  
Quantum thermodynamics

## Physics & Social services

My dad works on things  
that nobody can see,  
writes strange symbols,  
and talks often to his  
computer.

Sara, 6 years

*The first quantum revolution*

*Fermi*

*Pauli*

New laws that rule the physical world

*The first quantum  
revolution*

$|\psi\rangle$  state vector (or ket)

$i\hbar\partial_t|\psi\rangle = \hat{E}|\psi\rangle$  Schroedinger eq.

$\rho$  density matrix

It does not evolve according to  
the Schroedinger eq.

New laws that rule the physical world

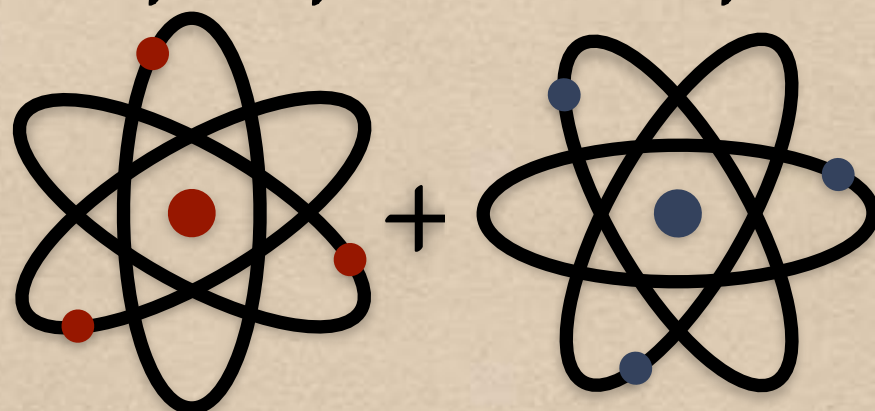

## *The split*

What set the quantum and classical worlds apart?

The superposition principle

$$|\psi\rangle = \frac{|\text{Rosso}\rangle + |\text{Blue}\rangle}{\sqrt{2}}$$

When applied to more than a single particle  
it implies entanglement

# Entanglement

Schroedinger

E. Schroedinger,

Naturwissenschaften 23, 807 (1935)

“Thus one disposes provisionally (until the entanglement is resolved by actual observation) of only a common description of the two in that space of higher dimension. This is the reason that knowledge of the individual systems can decline to the scantiest, even to zero, while that of the combined system remains continually maximal. Best possible knowledge of a whole does not include best possible knowledge of its parts — and this is what keeps coming back to haunt us”

# Entanglement

$$|\psi\rangle = \frac{|\text{Rosso}\rangle_A |\text{Blue}\rangle_B + |\text{Blue}\rangle_A |\text{Rosso}\rangle_B}{\sqrt{2}}$$

Entanglement is a resource for quantum technologies

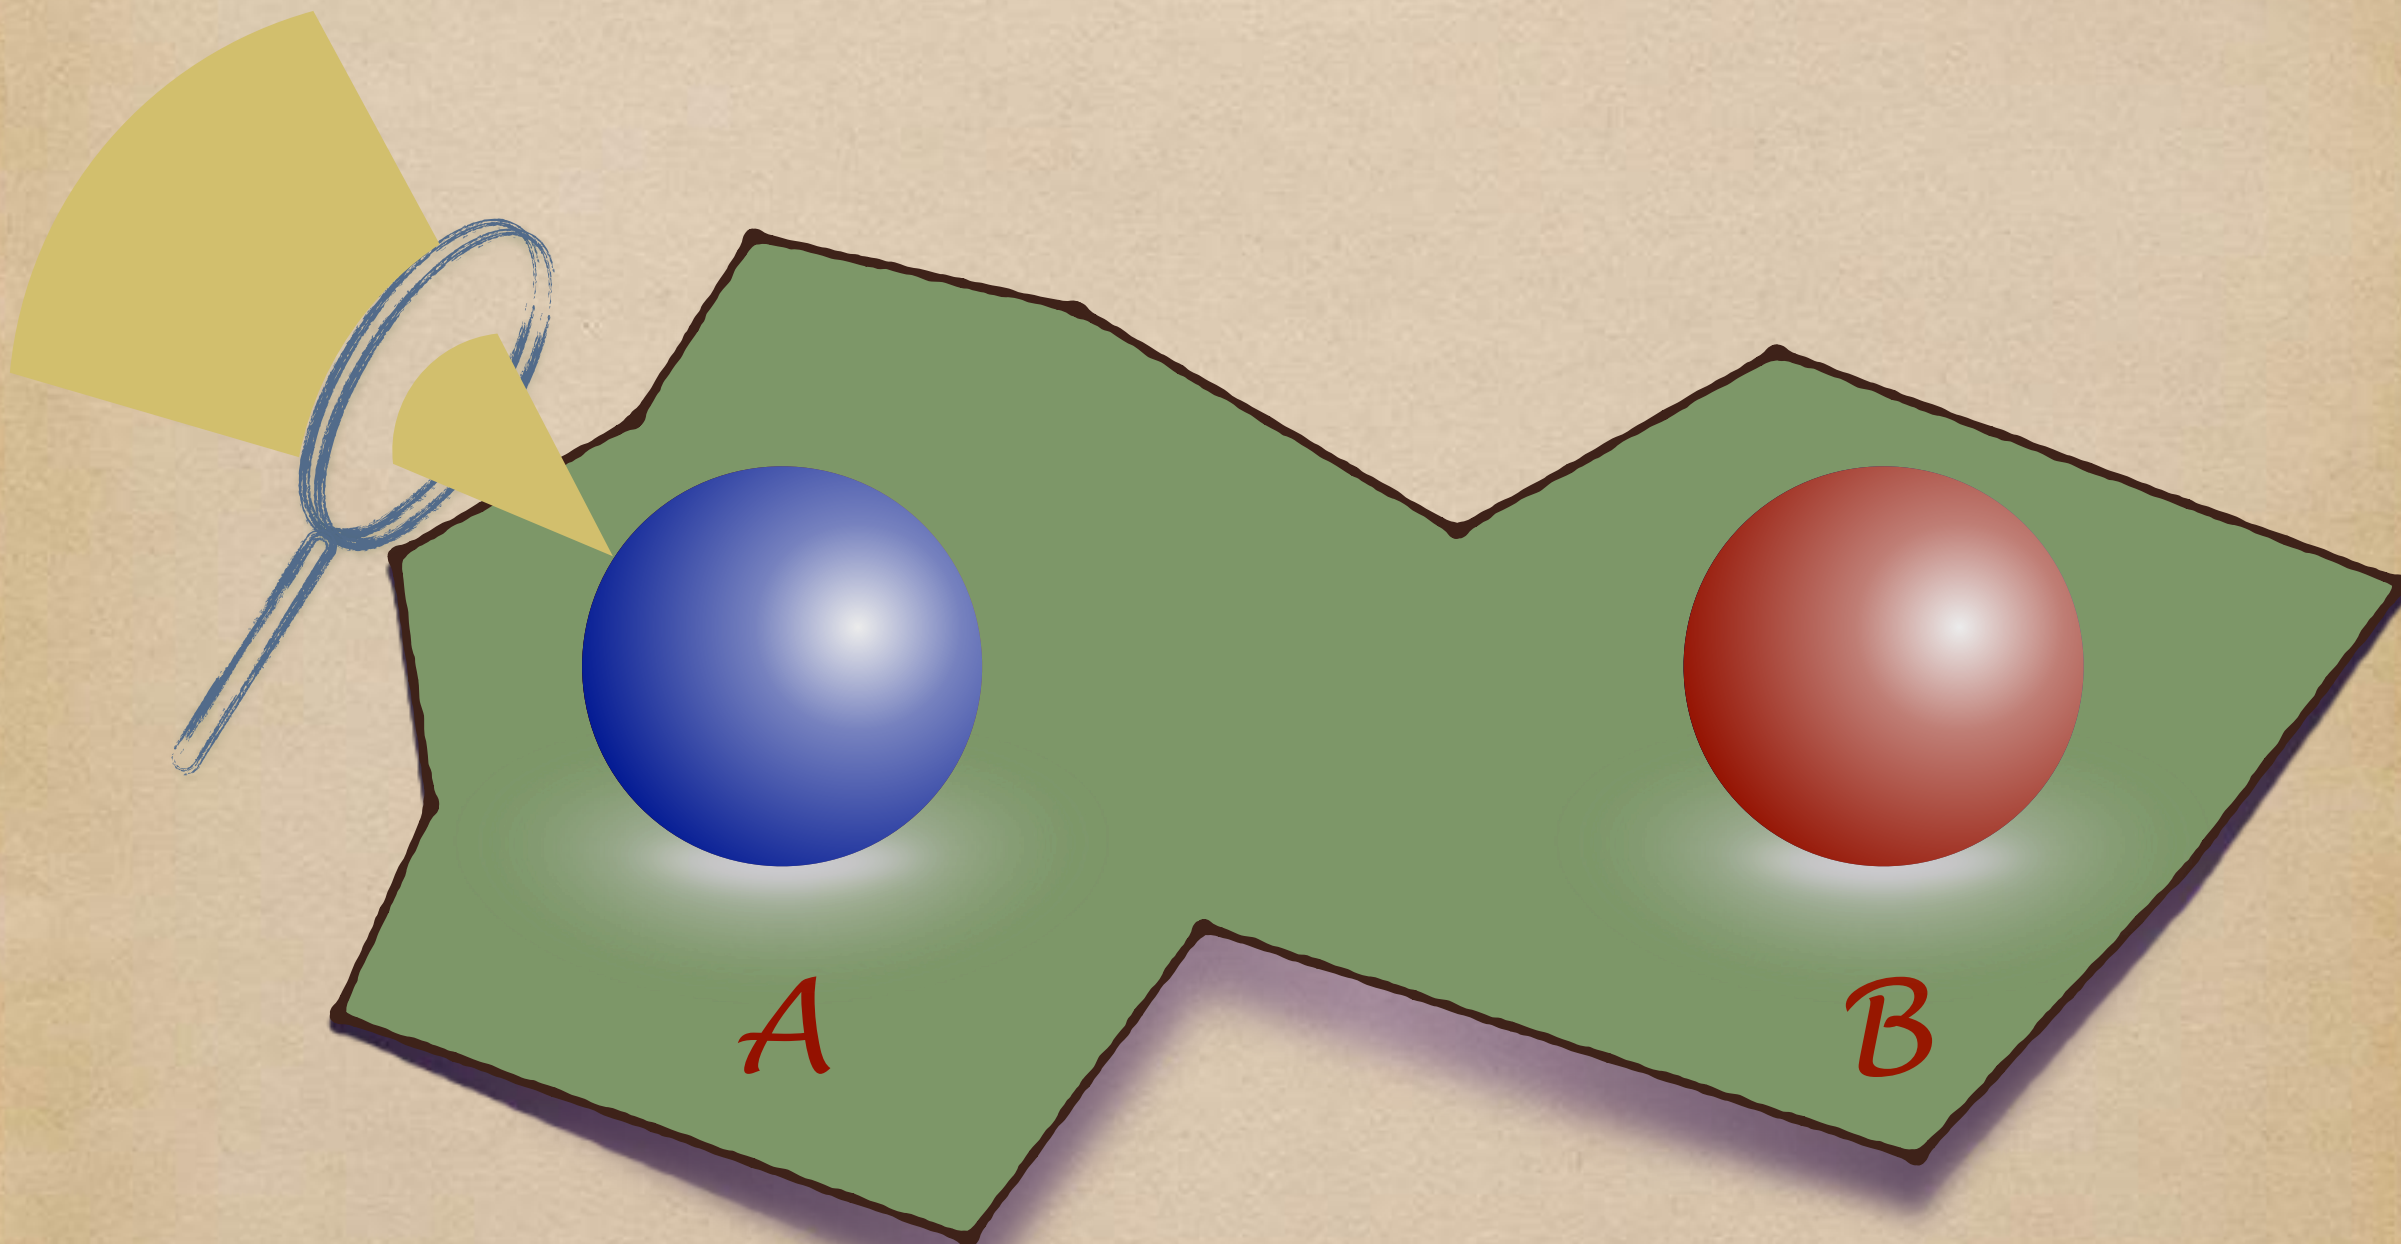

# Entanglement

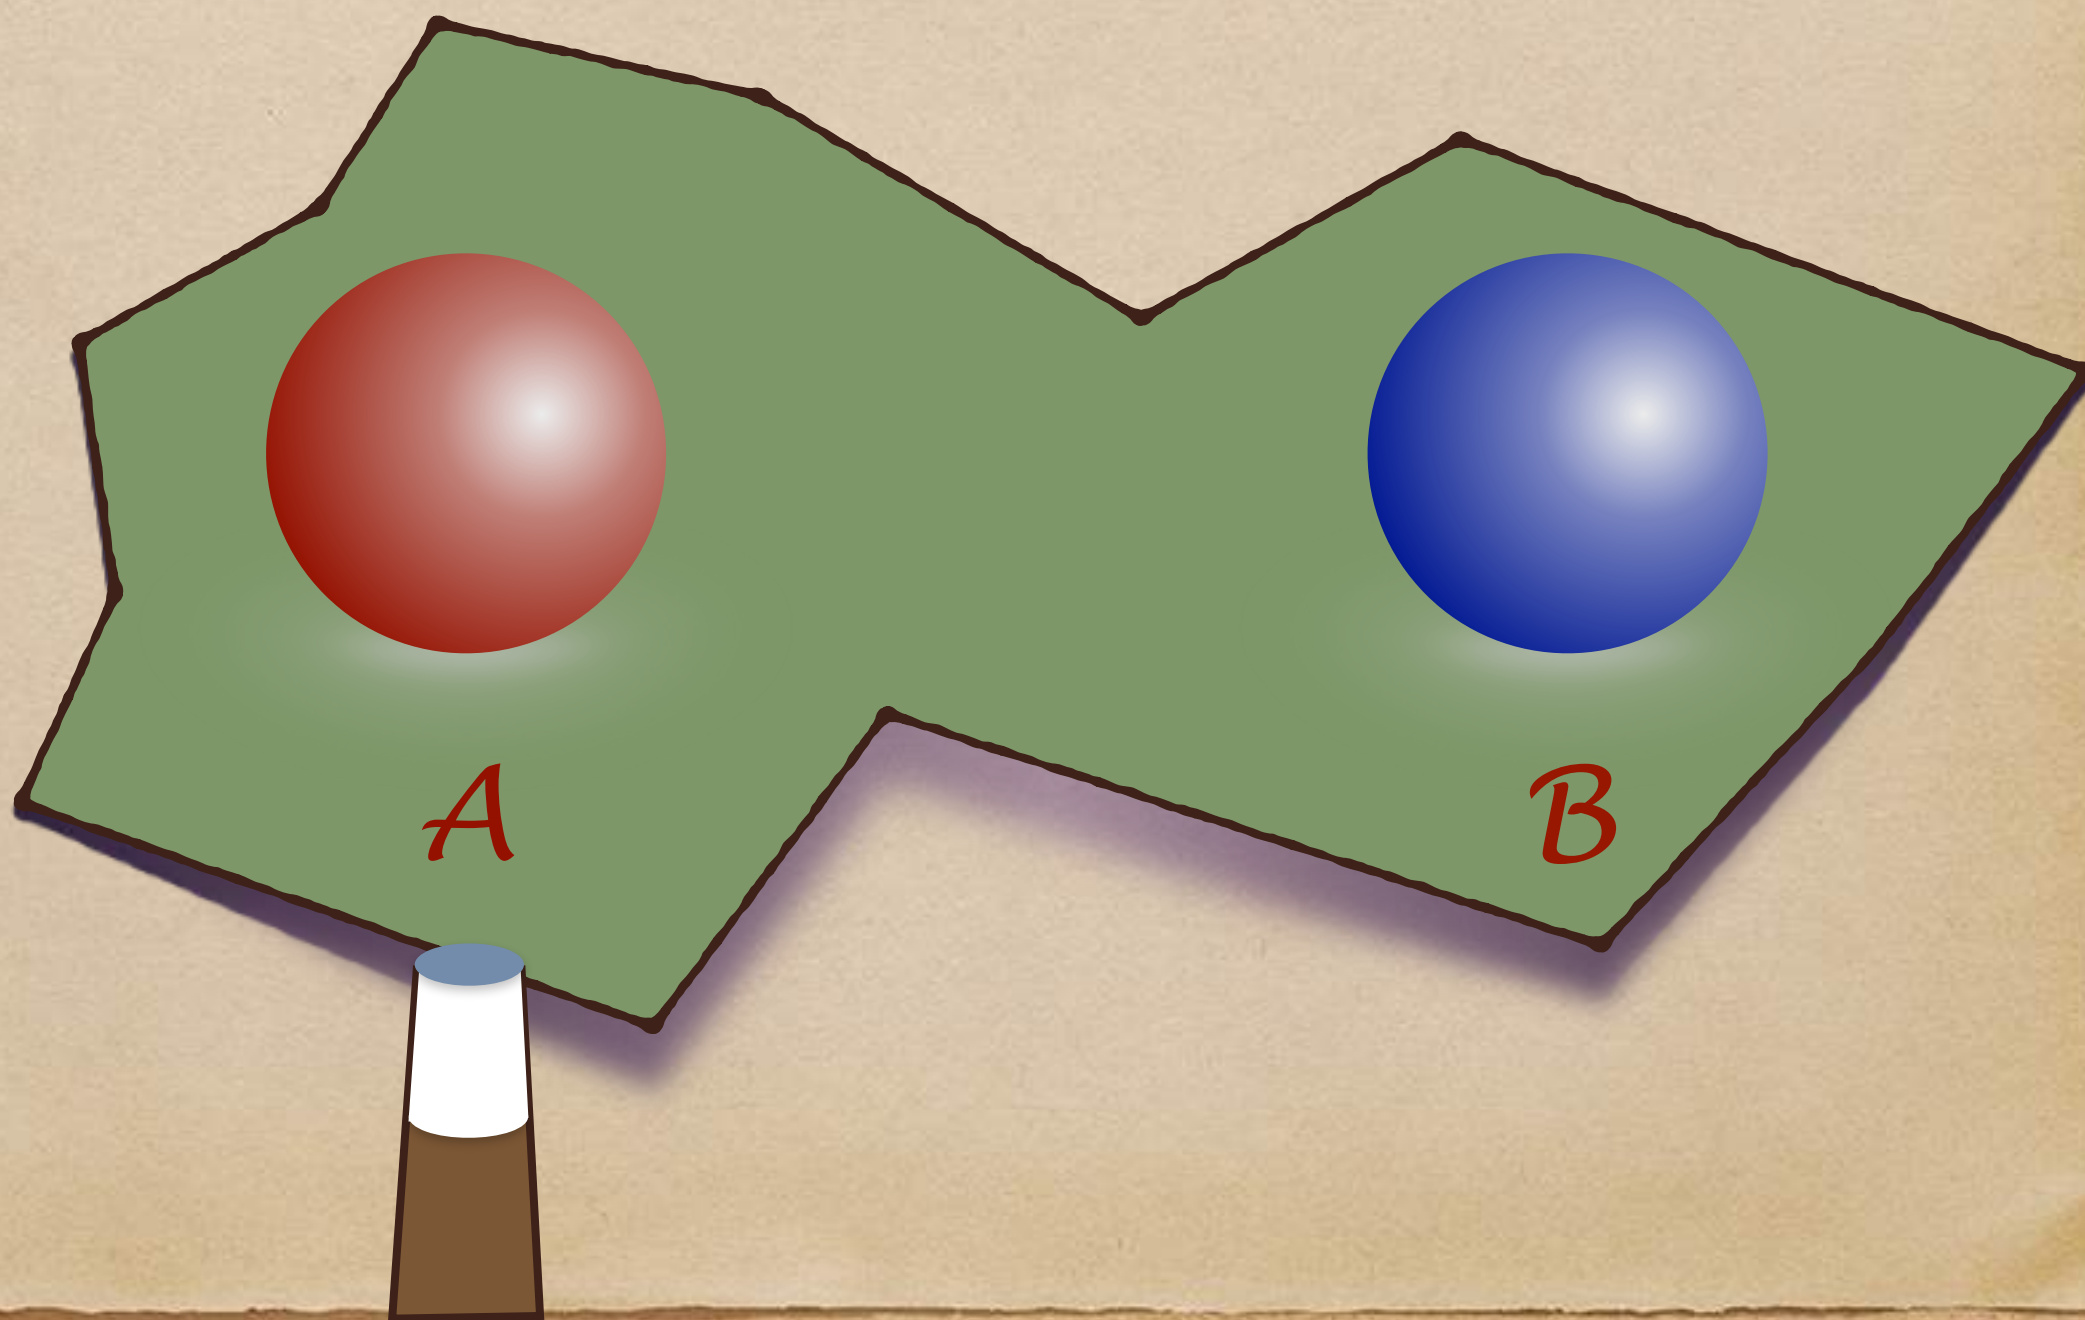

# *Entanglement*

# *Entanglement*

# Quantum fashion

Reinhold Bertlmann

# *A battle of giants*

**Realism**

Or against quantum randomness

*Einstein*

*Bohr*

**Locality**

Or against spooky actions at distance

These assumptions define classical reality and bound the degree of correlation among events spatially separated and disjoint (Bell theorem)

Entangled systems violate such bound!!

*Bell's test*

Classically

$$\mathcal{B} = |C(A1, B1) + C(A1, B2) + C(A2, B1) - C(A2, B2)| \leq 2$$

$\pm 1$

Quantumly

$$2 < \mathcal{B} \leq 2\sqrt{2}$$

The second quantum revolution:  
we can control the quantum world

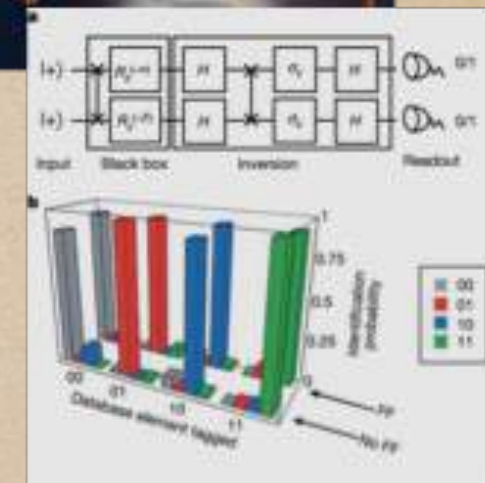

# Quantum realities

Quantum cryptography

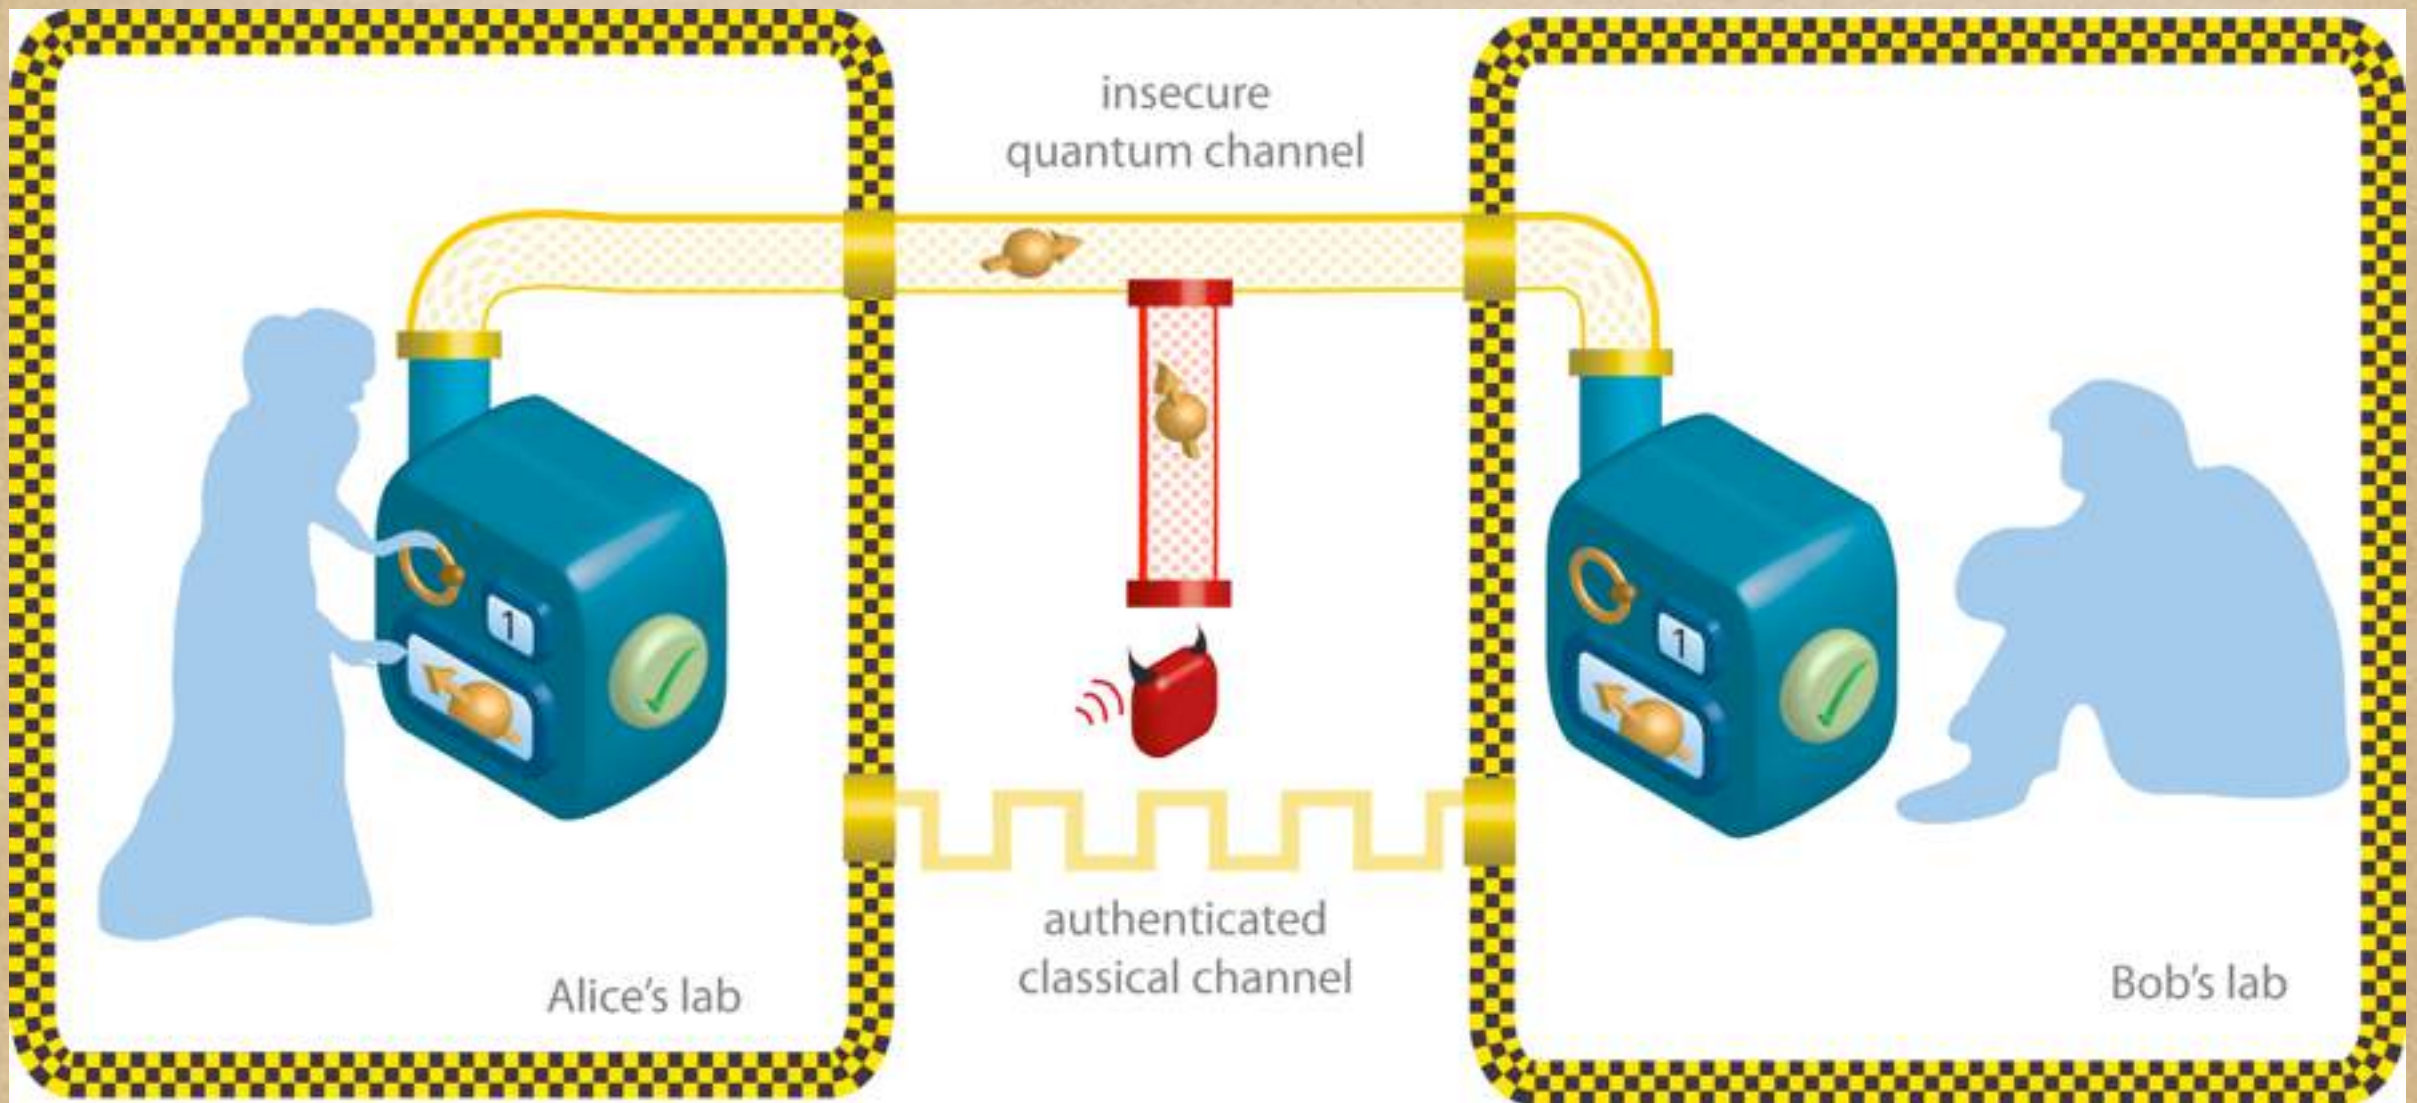

Quantum teleportation

Quantum computation

# Cryptography

# *Teleportation*

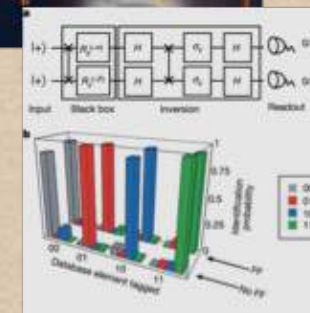

# Teleportation

Uhhh...

Quantum cryptography

Quantum teleportation

Quantum computation

We need microscopic systems  
All should be isolated  
The control should be perfect!

Are just microscopic systems under special conditions to be 'favoured'?

*Broadening  
the context*

Quantum effects are certified  
in our best labs!

Macroscopic quantum effects do not appear to be evident

$$\frac{1}{\sqrt{2}}|\text{cat up}\rangle + \frac{1}{\sqrt{2}}|\text{cat down}\rangle$$

*Broadening  
the context*

Quantum effects are certified  
in our best quantum labs

Macroscopic quantum effects do not appear to be evident

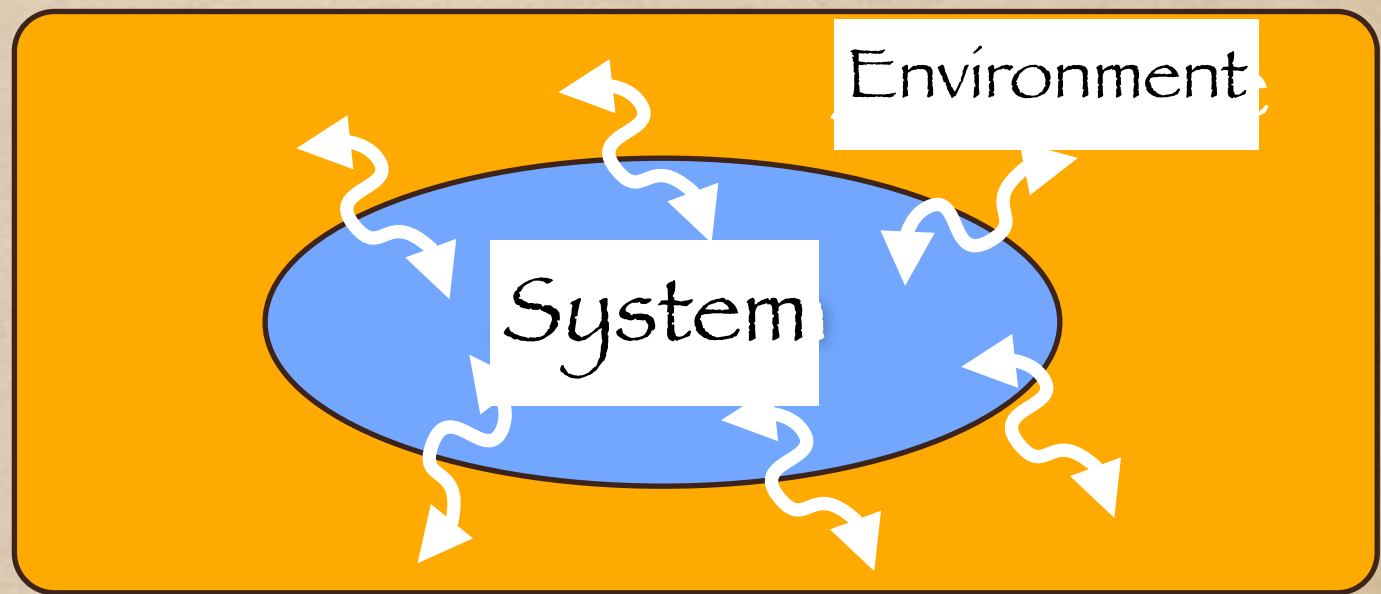

# Decoherence

Wojciech Zurek, LANL

Environment: = what is not 'system'

$$i\hbar\partial_t|\psi\rangle = \hat{E}|\psi\rangle$$

Eq. di Schroedinger:  
no environment

$$\partial_t\rho = \mathcal{L}(\rho)$$

Master Equation:  
environment is there

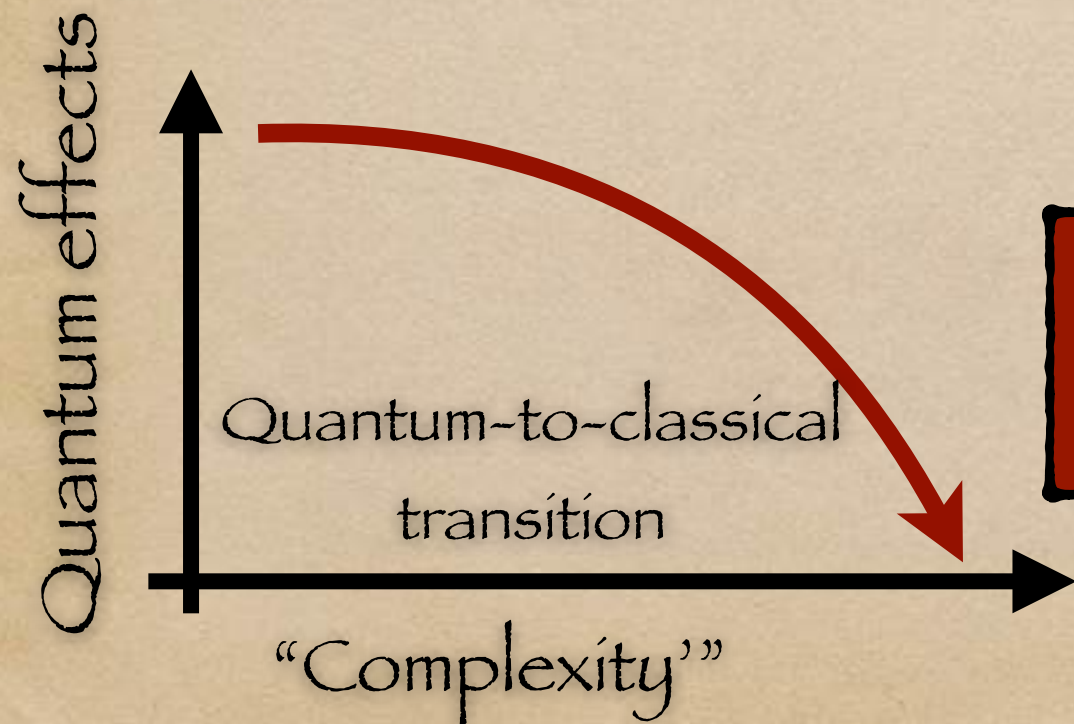

# Decoherence

Wojciech Zurek, LANL

Environment:=what is not system

Is it possible to observe quantum effects at a macro scale?

*No, no, no!*

*Lux fiat!  
and a mirror, vibrating*

*Lux fiat!*  
*and a mirror, vibrating*

# Levitated nanospheres

*Lux fiat!*  
*and a mirror, vibrating*

*Lux fiat!  
and a mirror, vibrating*

Classically

$$E = \frac{p^2}{2m} + \frac{1}{2}m\omega^2 x^2$$

Quantumly

$$E = \hbar\omega(n + 1/2)$$

*Entanglement  
in optomechanics*

# Quantum cats

Schroedinger

No, no, no!

**The dawn of quantum biology**

*The key to practical quantum computing and high-efficiency solar cells may lie in the messy green world outside the physics lab.*

BY PHILIP BALL

Nature 474:272-274 (2011)

$$i\hbar \frac{\partial \Psi}{\partial t} = -\frac{\hbar^2}{2m} \frac{\partial^2 \Psi}{\partial x^2} + V(x)\Psi(x,t)$$
